

# CUT FLOWER

## Care Guide

EXTEND VASE LIFE WITH THE FOLLOWING TIPS

### WATER AND STEMS

Make a fresh angled cut on the stems with a sharp snips. Remove all foliage below the waterline.

### CONTAINER AND WATER

Choose a vessel that is clean enough to drink from. Water must be free of debris to prevent clogged stems.

### DISPLAY LOCATION

Display away from direct sun and heat and away from ripening fruits and vegetables.

### REFRESH AND RECUT

Every 2-3 days, change the water and cut the stems. This encourages them to continue taking up water.

*Enjoy!*
